It is zvegf2 protein in a dimeric form acts as a mitogen for fibroblasts or smooth muscle cells. zvegf2 is claimed to be useful for stimulating the revascularisation of tissue or the re-endothelialisation of vascular tissue. zvefg2 is particularly claimed to be useful for the treatment of full-thickness skin wounds, including venous stasis ulcers and diabetic ulcers. The zvegf2 protein is also claimed to be useful as an additive in tissue adhesives for promoting revascularisation of the healing tissue. Antagonists against zvegf2 can be used to block its mitogenic, chemotactic and angiogenic effects. The antagonists may therefore be useful for reducing growth of solid tumours by inhibiting neovascularisation of the developing tumour or by directly blocking through the treatment of diabetic retinopathy, psoriasis,

                                                                                                                                                                                                                                                                                                                                                                                                                                        collateral circulation in tissue infarction or arterial stenosis, such as coronary artery disease, and inhibition of angiogenesis in the treatment of cancer or of diabetic retinopathy. It can also be used in the treatment of lung disorders to improve blood circulation in the lung and/or gaseous exchange between the lungs and the blood stream or to improve blood circulation to the heart and O2 gas permeability in cases of cardiac insufficiency, to improve blood flow and gaseous exchange in chronic obstructive airway disease, or to treat malabsorptive syndromes in the intestinal tract. Quantitation of VEGF-D in cancer biopsy specimens may be useful as an indicator of future metastatic risk. Antagonists can be used for treating or conditions such as concertive heart failure.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             23-AUG-1996;

The VEGF-D protein, compounds and antibodies, which can bind the protein, may be useful in, e.g. gene therapy and in treatment of inflammation and oedema. Vectors, containing the VEGF-D DNA, and VEGF-D DNA sequences may be used for screening for the compounds which bind to the VEGF-D protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CC (VEGF-X) protein (Ia) and its encoding polynucleotide (IIa) which has CC (VEGF-X) protein (Ia) and its encoding polynucleotide (IIa) which has CC vulnerary, cytostatic, antirheumatic, antiarthritic, antipsoriatic and CC antidiabetic activity and acts as an angiogenesis and vascularization CC regulator. An antisense molecule of the invention is useful for treating CC or preventing cancer, rheumatoid arthritis, psoriasis and diabetic cetinopathy by inhibiting angiogenic activity or inappropriate vascularization including formation and proliferation of new blood CC vessels, growth and development of tissues, tissue regeneration and organ CC or preparing medicaments for treating wounds such as dermal ulcers, comparing the products of the invention are useful CC pressure sores, venous sores, diabetic ulcers and burns and to promote Skin graft growth, tissue repair, proliferation of new blood vessels, ctissue regeneration and organ repair by promoting angiogenic activity or vascularization. This sequence represents the human VEGD protein used to illustrate the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence is the protein sequence of the human vascular endothelial growth factor D (VEGF-D). It was used to demonstrate the methods of the invention, which involve the screening of individuals to determine which vascular endothelial growth factor receptor 3 (VEGFR-3, also known as Flt4 or fms-like tyrosine kinase 4) alleles they possess and thus their likelihood of developing hereditary lymphoedema. Conditions associated with lymphoedema include Milroy-Nonne syndrome,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Screening a human subject for increased risk of developing a disorder, comprises assaying a nucleic acid to determine a muraltering the sequence of a vascular endothelial growth factor receptor-3 -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ligand to Fild thereby inhibiting Filt4 mediated proliferation of vascular cendothelial cells. The compound is useful for treating neoplastic disease such as breast carcinomas, squamous cell carcinomas, lymphomas, melanomas and sarcomas. Filt4 receptor tyrosine kinase binding compounds can be used for manufacturing medicament useful for diagnostic screening, imaging and treatment of malignancles characterised by Filt4-expressing blood cells. The Filt4 gene maps to chromosomal region 5935 and is expressed as 5.8 kb and 4.5 kb mRNAs which differ in their 3' sequences and are differentially expressed in HEL and DAMI cell lines. Filt4 delights a subfamily of class III receptor tyrosine kinases (RTKs). It is used as a target for tumour imaging and anti-tumour therapy. The present sequence is a human prepro-vascular endothelial growth factor D (VEGF-D), a specific example of Filt4 binding compound. A recombinantly matured VEGF-D lacking residues 1-92 and 202-354 retains the ability to activate VEGFR-3 and VEGFR-3 receptors and

VEGF-D has the ability to stimulate re-endothelialisation of an injured blood vessel, without significant stimulation of smooth muscle cell proliferation. It can bind to and stimulate VEGFR-2 (vascular endothelial growth factor receptor) and/or VEGFR-3 phosphorylation in cells that express such receptors. An anti-restenosis agent comprising either a VEGF-D gene or protein is used in a method to reduce or prevent restenosis and stenosis of a blood vessel following vascular trauma e.g., cardiovascular surgery and percutaneous transluminal coronary angioplasty.

                                                                                                                                                                                                                                    δÃ
                                                                                                                                                                                                                                                                                                                                                                    CC ameliorate disease and to detect diseases, or succeptibility, by detecting mutations or the presence or amount of angiogenic protein cc expression. Particularly they are used to stimulate wound healing, CC growth of damaged bone and tissue, and for repair of vascular tissue, CC especially peripheral arterial disease, critical limb ischaemia or CC coronary disease. Antagonists of the sequences are used to inhibit any coronary disease in tumours and to treat inflammation (where associated with CC increased vascular permeability), diabetic retinopathy, rheumatoid CC arthitis or psoriasis. Agonists are also useful for stimulating CC (lymph)angiogenesis. The proteins are also useful for stimulating CC (lymph)angiogenesis. The proteins are also useful for raise antibodies. The antibodies are useful as therapeutic agents) and to raise antibodies. CC The antibodies are useful as therapeutic (ant)agonists; for detection, CC purification and targeting of proteins for in vivo or in vitro diagnosis (c including imaging) or for therapy (including when linked to e.g. a label CC or cytotoxin); and for immunotyping of cells, e.g. for detecting minimal CC reseases or haematopoietic progenitor/stem cells. It is also CC contemplated that the sequences might be useful for treating a very wide range of other disorders, e.g. autoimmne diseases; allergy; cancer; infectious diseases (viral, bacterial, fungal or parasitic); recentration, of the norvous system atc.

                                                                                                                                          Qy
                                                                                                                                                                           Db
                                                                                                                                                                                                       Qγ
                                                                                                                                                                                                                                                                                                                       The present invention relates to a method for screening a human subject for an increased risk of developing a lymphatic disorder e.g. hereditary lymphedoema. The method comprises assaying nucleic acid of a human subject to determine a presence or an absence of a mutation altering the sequence or expression of vascular endothelial growth factor receptor-3 (VEGFR-3)/fms-like tyrosine kinase 4 (Flt4) allele (see AAC68952 and AAB37604) and determining an increased risk of developing lymphatic disorder from presence or absence of the mutation. The presence of a mutation altering the encoded amino acid sequence or expression of at least 1 VEGFR-3 allele in the nucleic acid correlates with an increased risk of developing a lymphatic disorder. Treatment for hereditary lymphedoema can be provided through the administration of vascular endothelial growth factor C (VEGF-O) and vascular endothelial growth factor c (VEGF-O) and vascular endothelial growth factor is the protein sequence for VEGF-D.
                                                                                                                                                                                                                                                         Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes a method for inducing angiogenesis in a tissue, or area, in need of angiogenesis, in a mammal. The method comprises administering recombinant vascular endothelial growth factor D (VEGF-D) or its angiogenically active fragment or mutant (I). The present sequence represents the human VEGF-D protein, which can be used in the method of the invention. (I) has cardiant and vasotropic activities, and is an angiogenesis inducer. The method can be used for inducing angiogenesis in a tissue in need of angiogenesis, or in an area in need of angiogenesis in a mammal. (I) is useful for treating various is chaemic conditions manifested by vascular insufficiency such as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             angiogenesis; c:fos induced growth factor D; VEGF-D; angiog ischaemic condition; ischaemia; vascular insufficiency; peripheral vascular disease; coronary artery disease; myocardial infarction.

                                                                                                                                                              Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               3 Polypeptide sequences (AAW1493-95) are the respective translated sequences of reading frames 1, 2 and 3 of clone HF175 (AAT62961), the human homologue of murine clone F0401 (AAT62960), which codes for a novel c-Fos induced growth factor (FIGF) (see also AAW14992). Examination of the 3 polypeptides indicates that reading frame 2 has the longest region free of nonsense codons. FIGF is a c-fos-dependent autocrine growth factor able to induce cell division entry and, when over-expressed, a transformed phenotype in
                                                                                                                                                                                                                                                                                                                       Recombinant FIGF can be produced in tumours and development. Recombinant FIGF can be produced in transformed host (e.g. CHO) cells. It can be used to identify its receptors and in an assay for the identification of agonists and antagonists. Antibodies raised against FIGF can be used to block the function of the protein and thereby inhibit or suppress tumour growth. Transgen animals expressing FIGF can be generated for use e.g. as models
                                                                                                                                                                                                                                                Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Nucleotide molecule encoding c-Fos induced growth factor protein useful in therapy, in manufacture of compositions for treatment developmental disorders and in generation of transgenic animal

VEGF-D2 can be used for e.g. acceleration of angiogenesis in wound healing, tissue or organ transplantation, or to establish collateral circulation in tissue infarction or arterial stenosis, such as coronary artery disease, and inhibition of angiogenesis in the treatment of cancer or of diabetic retinopathy. It can also be used in the treatment of lung disorders to improve blood circulation in the lung and/or gaseous exchange between the lungs and the blood stream or to improve blood circulation to the heart and O2 gas permeability in cases of cardiac insufficiency, to improve blood
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          05-FEB-1997;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         flow and gaseous exchange in chronic obstructive airway disease, or to treat malabsorptive syndromes in the intestinal tract. Quantitation of VEGF-D in cancer biopsy specimens may be useful as an indicator of future metastatic risk. Antagonists can be used for treating e.g. conditions such as congestive heart failure, involving accumulations of fluid in the lung resulting from increases in vascular permeability. The products can also be used for account of the congestive heart failure increases in vascular permeability.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             vascular endothelial growth factor; VEGF-D; angiogenesis; modification; acceleration; wound healing; tissue; organ; transplants; collateral circulation; infarction; arterial stenosis; coronary artery disease; inhibition; cancer; treatment; diabetic retinopathy; lung disorders; blood circulation; gaseous exchange; chronic obstructive airway disease; intestinal malabsorptive syndrome; biopsy; metastatic risk; detection; diagnosis; congestive heart failure.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 16; Pages 64-65; 101pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Ş
collateral circulation in tissue infarction or arterial stenosis,
couch as coronary artery disease, and inhibition of angiogenesis in
the treatment of cancer or of diabetic retinopathy. It can also be
used in the treatment of lung disorders to improve blood circulation
in the lung and/or gaseous exchange between the lungs and the blood
stream or to improve blood circulation to the heart and O2 gas
permeability in cases of cardiac insufficiency, to improve blood
flow and gaseous exchange in chronic obstructive airway disease,
or to treat malabsorptive syndromes in the intestinal tract.
Quantitation of FUGF-D in cancer biopsy specimens may be useful
for treating e.g. conditions such as congestive heart failure,
involving accumulations of fluid in the lung resulting from
increases in vascular permeability. The products can also be used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 01-JUL-1997;

It is encoded by the F0401 gene (AAT62960) obtd. from mouse fibroblast cells. FIGF is a c-fos-dependent autocrine growth factor able to induce cell division entry and, when over-expressed, a transformed phenotype in fibroblasts. It could be implicated in tumours and development. Recombinant FIGF can be produced in transformed host (e.g. CHO) cells. It can be used to identify its receptors and in an assay for the identification of agonists and antagonists. Antibodies raised against FIGF can be used to block the function of the protein and thereby inhibit or suppress tumour growth. Transgenic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Key
